- Event management and ticket booking are important in today's digital world.
- Traditional event booking systems involve manual processes, paperwork, and limited accessibility.
- Managing events, ticket bookings, and user data manually can lead to delays and errors.
- The Dynamic Event Management & Ticket Booking System provides a web-based solution.
- This system allows users to register, login, explore events, and book tickets online.
- It automatically generates tickets and manages bookings efficiently.
- The system reduces manual work and improves accuracy and user experience.
- This project demonstrates how web technologies can simplify event management.

PROBLEM STATEMENT

1

- Traditional event management systems rely on manual processes and offline bookings.

2

- Managing event details, ticket bookings, and user records manually requires significant time and effort.

3

- Manual booking systems may lead to errors such as duplicate bookings or incorrect data handling.

4

- Users face difficulty in discovering events and booking tickets quickly.

5

- There is no centralized platform to manage events, bookings, and ticket generation efficiently.

6

- Lack of real-time updates makes it difficult to track available events and bookings.

7

8

- Event organizers face challenges in managing multiple events and users simultaneously.

9

- Therefore, there is a need for a web-based system that automates event management and ticket booking.

OBJECTIVE(S)

- To design and develop a Dynamic Event Management & Ticket Booking System.
- To provide a secure user registration and login system for accessing the platform.
- To allow users to explore available events with complete details such as date, location, and price.
- To implement an online ticket booking system with automatic section (seat) allocation.
- To generate and manage tickets digitally for users after successful booking.
- To store booking details and event information in a database for future reference.
- To provide an admin panel for managing events, users, and bookings efficiently.
- To reduce manual work and improve accuracy in event management processes.

PROPOSED SYSTEM

- The proposed system is a web-based Dynamic Event Management & Ticket Booking System.
- It allows users to register, login, and access the platform securely.
- Users can browse available events with details such as date, location, and price.
- The system enables users to book tickets online by selecting the number of tickets.
- It automatically generates section numbers (seats) for each booking.
- The booking details and ticket information are stored in a database for future reference.
- Users can view their booking history and manage their tickets easily.
- The system also provides an admin panel to manage events, users, and bookings.
- It reduces manual work, improves accuracy, and provides a fast and efficient solution for event management.

WORKFLOW

STEP-BY-STEP WORKFLOW

TECHNOLOGIES USED

Frontend:

- HTML5
- CSS3

Backend:

- PHP (Core PHP)
- Login authentication
- Event Creation
- Booking Processing

Database:

- MySQL

Tools:

- XAMPP(Local Server)
- phpMyAdmin(Database Managemant)
- VS Code (Code Editor)

Hardware / Software Requirements:

- **System:** Windows 10
- **RAM:** Minimum 4GB
- **Software:** XAMPP Server

MODULE DESCRIPTION

Module 1: User Authentication Module

- Handles student **registration and login**.
- Ensures **secure access** to the examination system.

Module 2: Event Management Module

Allows admin to **create, edit, and delete events**

Displays all available events to users

Includes event details (date, location, price, image)

Module 3: Booking Module

Enables users to **book tickets for events**

Accepts number of tickets and section selection

Calculates total cost automatically

Module 4: Ticket Management Module

Generates **digital tickets** after booking

Displays tickets in **My Bookings / My Tickets**

Module 5: Admin Panel Module

Admin can **manage users, events, and bookings**

View system statistics

Control and monitor platform activities

IMPLEMENTATION SCREENSHOTS

1

2

3

4

5

6

7

8

9

Login Page:

- Allows users to enter email and password to access the system
- Validates user credentials using the database
- Redirects users to the dashboard after successful login
- Ensures secure authentication

Register Page:

- Enables new users to **create an account**
- Collects user details like **name, email, and password**
- Stores user data securely in the database
- After registration, users can login and access the platform

IMPLEMENTATION SCREENSHOTS

Booking Page:

- Displays complete **event details** selected by the user
- Shows information like:
 - Event title
 - Date
 - Location
 - Price per ticket
- Allows users to:
 - Enter **number of tickets**
 - Select **sections**

8(A)

9

The screenshot shows a 'Create Event' form with the following fields and elements:

- Event Title:** A text input field with the placeholder text 'e.g. Tech Summit 2026'.
- Description:** A text area with the placeholder text 'Describe the event...'.
- Event Date:** A date input field with the placeholder text 'mm/dd/yyyy' and a calendar icon.
- Location:** A text input field with the placeholder text 'e.g. Chennai Trade Centre'.
- Ticket Price (₹):** A text input field with the placeholder text 'e.g. 499'.
- Event Banner Image:** A file upload section with a 'Choose File' button and the text 'No file chosen'.
- Buttons:** A large yellow 'Publish Event' button and a smaller yellow 'Back to Events' button.

IMPLEMENTATION SCREENSHOTS

Booking Process:

- Automatically calculates **total price** based on tickets
- Validates user input before confirming booking
- Stores booking details securely in the database

8(B)

9

IMPLEMENTATION SCREENSHOTS

Confirmation & Ticket Generation:

- After booking, the system:
 - Confirms ticket booking
 - Generates a **digital ticket**
 - Updates booking status

8(C)

ADVANTAGES & LIMITATIONS

Advantages:

- Easy to use interface
- Fast ticket booking system
- Centralized data storage
- Real-time booking updates
- Admin can manage events easily
- Saves time and manual effort
- Scalable for future features

Limitations:

- No online payment system
- Basic security (needs improvement)
- Limited UI design
- No notification system
- Not mobile app supported
